Nexus360: what it costs US, and what we quoted

Source: our cost model (unit_costs.md, cost_model.py), the measured test on 6 CG builders, campaign 1 results. BSP rate Rs 1.5 per marketing message (owner). ASSUMPTION = our guess, no measured data.

1. Cost of ONE lead worked (our side, rupees)

ITEM	LOW	BASE	HIGH	BASIS
AI research (API-equivalent)	24	76	279	200k / 300k / 500k tokens per builder
Human review, 4.5 min	37	75	112	at Rs 500 / 1,000 / 1,500 an hour ASSUMPTION
WhatsApp, 2 messages x Rs 1.5	3	3	3	only if delivered; failed = not billed (confirm with BSP)
Video render + page	2	2	2	local PC, scripts; page on our VPS
Total per lead	**66**	**156**	**396**	

The real cost driver is delivery. Research is paid for every lead, but only some can be messaged. Per DELIVERED lead (base Rs 156): at 60% delivered = Rs 260, at 45% = Rs 347, at 30% (our 2 of 7) = Rs 520. Per builder reachable on WhatsApp: only 1 of 6 tested had a WhatsApp-wired published number, so about Rs 940 (n=6, indicative only).

2. Pilot, 50 builders: our cost against the Rs 45,000 quoted (scope trimmed to save hours)

LINE	AMOUNT	NOTE
Cash: research 50 × 76 = 3,780; voice 540; report AI 180; number/domain 1,000; hosting 500	Rs 6,000	WhatsApp (Rs 45 to 225) is passed through, not in cost
One-time set-up hours, trimmed	28 h	video+page 10 (reuse template, one short master video), dashboard 3 (weekly export instead of a live view), hand-off 4 (alert-only, no AI replies), number+templates 4, fetch+enrich 4, QA 3. Before trimming: 41 h
Running hours (review, daily check, 2 syncs, report)	10 h	was 10.9 h
Total hours	**38 h**	

IF OUR TIME IS VALUED AT	OUR COST	RESULT AT RS 45,000
Rs 500 an hour	Rs 25,000	**+Rs 20,000 (44% margin)**
Rs 1,000 an hour	Rs 44,000	**+Rs 1,000 (no loss)**
Rs 1,500 an hour	Rs 63,000	**-Rs 18,000**

No loss up to about Rs 1,000 an hour. The cash we really spend is only about Rs 6,000; the rest is our own time. Most of the set-up is reusable for the next client. The trimmed hours are our estimate ASSUMPTION.

3. Monthly run, up to 100 builders: our cost against Rs 30,000

LINE	AMOUNT
Cash: research 100 × 76 = 7,600; voice 540; report AI 300; number/BSP 1,000; hosting 500	Rs 9,940
Hours: 100 × 4.5 min = 7.5 h + replies 3.7 h + syncs 3 h + upkeep 3 h	17.2 h
Cost at Rs 500 / 1,000 / 1,500 an hour	Rs 18,540 / 27,140 / 35,740
Result at Rs 30,000	**+11,460 / +2,860 / -5,740**

4. Claude plan (USD 100) and the page + video

- **Yes, it uses the limit, but only once.** Designing the Nexus360 page, video script and QA is about 1.5 to 3M tokens one time (API-equivalent about Rs 200 to 400). ASSUMPTION
- **Each lead's page and video use no AI tokens:** they are made by scripts (build_site_pages.py, render_master.py). Render is local (40 s to 5 min).
- **Hosting on our VPS costs no tokens;** only the deploy session does (about 20 to 50k tokens). The server is already paid.
- **Research is the big one:** 300k tokens x 100 builders = 30M tokens a month, too much for a plan with opaque limits (we hit the limit today). Client work should run on pay-per-use API (Rs 76 a builder).

5. What we quoted Sridhar

- Pilot **from Rs 45,000** (50 builders, 2 messages each, master video, page, hand-off, read-only view, Day-17 report); monthly **from Rs 30,000** (up to 100 builders).
- WhatsApp at actual cost, estimated Rs 50 to 230, cap Rs 500.
- Comparison with one sales employee (about Rs 36,900 all-in) and the value he gets. **No per-lead cost shown.**
- Extras (more builders, languages, states, CRM, email) are priced only after his answers.

Open before we really start: BSP's real plan fee and GST on the Rs 1.5; a +91 number (availability and cost unknown); Meta quality rating of our line; the forward-only reply rule and the read-only dashboard view are promised but NOT built; the 4.5 min per builder is unmeasured (a manual lookup can take 5 to 10); the real-owner hit rate rests on 6 builders.
