PROPOSAL AND ESTIMATE FOR SRIDHAR PATNAIK, GREYBOARD CONSULTING (NEXUS360)

Researching the real owner of Chhattisgarh builders, then WhatsApp outreach where a business-published number exists

We research who is behind each builder on the public RERA register, where public evidence supports it. Where a business has published a WhatsApp-capable number, we send two fixed, approved messages with a personalised page and video. No AI conversation with an owner: every genuine reply goes to you.

What you get

- A researched builder list: the owner or decision-maker where public evidence supports it, with a confidence label, source and date. A person checks every record.
- Two fixed WhatsApp messages, a personalised page and a 17-second video, for builders with a WhatsApp-capable published number.
- A dashboard, and every genuine reply handed to you.
- Every claim marked Fact, Estimate, Assumption or Opinion.

What it costs PROPOSED

₹75,000

Option A: two-week pilot, 50 builders, fixed, before 18% GST. Recommended first step.

- Then, only if you want it, a monthly run of 150 builders: about **₹45,000 a month**, or ₹30,000 plus ₹3,000 per demo held (page 7).
- Or research only: ₹18,500 for 50 builders.
- WhatsApp fees at cost: about ₹30 to ₹200 for the pilot, capped at ₹500.

What we need from you

- Your positioning, and a yes or no on each product line we take from nexus360.in.
- Two short screen recordings, your logo, a voice choice and written permission to use the Nexus360 name.
- A WhatsApp number for hand-off alerts, your job title as you want it shown, and your customer list.
- Optional: CRM test access.

WHAT WE HAVE ALREADY CHECKED

72
builders shortlisted from 2,173 registered projects on the public Chhattisgarh RERA list, 20 Oct 2026. FACT

4 likely
of 6 builders in our test had an owner named from public sources; none verified. 95% range 30% to 90%. Small or medium builders: 2 of 4. FACT, SMALL SAMPLE

1 of 6
had a business-published number wired for WhatsApp. A verified direct owner WhatsApp number: **0 of 6**. FACT, SMALL SAMPLE

2 of 7
of our own cold WhatsApp templates arrived on time. 3 failed: Meta refused 2 under a per-recipient marketing limit, 1 was undeliverable. FACT

What we do not promise

Replies, demos or customers. That every owner's direct number can be found. That every builder can be messaged on WhatsApp: a builder with no WhatsApp-capable published number is researched but not messaged in the pilot. Anything in Madhya Pradesh. All prices are proposals and can change after your feedback.

YOUR QUESTIONS FROM OUR CALL, AND WHERE THEY ARE ANSWERED

RERA numbers are not the real owner	pp. 2, 3	Page and video made for Nexus360	p. 5
The WhatsApp account is ours	pp. 6, 10	The number: estimated cost	p. 7
Research first, then WhatsApp, no email	pp. 2, 6	Sales employee or our system	p. 8
Genuine replies are taken by you	pp. 2, 4	Your CRM, data shown visually	pp. 4, 9
A demo, and it must look good	pp. 3 to 5	Next steps	p. 10

Labels. FACT public source or our records. ESTIMATE our calculation. ASSUMPTION our guess. OPINION our recommendation.

How it works

Five steps from the public register to your phone. A person checks the research before anything is sent, and you take every genuine reply. Only two messages go out.

1 RERA register shortlist by rules	We read the public Chhattisgarh RERA list (one request, no login) and apply rules you can see: three districts, valid registration, housing, private builders, not your customers. Today that leaves 72 builders.	AUTOMATED
↓ shortlist		
2 Real-owner research and enrichment	For each builder we look for who is behind it, where public evidence supports it: its own site, company records and the filing. Each record carries VERIFIED, LIKELY or UNKNOWN, a source link and a date. A person checks it before any message.	A PERSON CHECKS
↓ checked records		
3 WhatsApp message, page and video	Only where the business published a WhatsApp-capable number: a short message from IV Infotech's line with a personalised page and a 17-second video. You approve the wording first. Every message has a STOP line. Others are not messaged.	AUTOMATED
↓ messages sent		
4 Follow-up and tracking	One fixed follow-up if there is no reply and no STOP. The dashboard shows sent, delivered, read, page opened and replied. When a builder replies or taps a button, all automatic messages to that builder stop.	AUTOMATED
↓ a builder replies		
5 Genuine reply handed to you	A typed reply or button tap from a person (not STOP, a greeting or an auto-reply) is alerted to you on WhatsApp with the exact words, the builder, the owner and what they opened. No AI conversation with an owner: you answer.	YOU

You said the RERA number is often not the real owner. Our test partly agrees.

On six register pages, the filed contact was the promoter or managing director himself in **3** (in 2 of those the filed email looked like an adviser's), a salaried officer in **2**, and unknown in **1**. So it is often an officer or another person's mailbox, and sometimes the owner's own mobile. We start at the register, not stop there. FACT, 6 BUILDERS OUR READING

The first message SAMPLE WORDING

Hi Rakesh, IV Infotech here, writing for Sridhar Patnaik of Nexus360 (ERP and CRM for builders). We saw Sample Residency in Raipur on the RERA register and made you a short video.
One question: do you track site indents and stock in Excel or in software today?

Reply STOP to opt out. Buttons: Excel, Software, Stop.

The follow-up SAMPLE WORDING

Hi Rakesh, IV Infotech again, for Sridhar Patnaik (Nexus360). If site requests for Sample Residency still go to the office by phone or WhatsApp, Sridhar can show you the indent-to-purchase-order flow in a 20-minute demo. Reply YES and he will call you.

Sent only if there is no reply and no STOP. Reply STOP to opt out.

You agree the final wording on Day 6. The Hindi needs a native-speaker check.

Sources. Chhattisgarh RERA list, rera.cgstate.gov.in/Approved_project_List.aspx, 20 Oct 2026, one request, no login; six register pages and each builder's own site. The six were chosen for variety: indicative only.

The demo (1 of 3): real Chhattisgarh data

On 20 Oct 2026 we ran the public register through visible rules and researched six builders by hand. Everything on this page is real. Nothing was sent.

From 2,173 registered projects to 72 builders FACT

RULE APPLIED	PROJECTS LEFT, BARS TO SCALE	REMOVED
All registered projects	2,173	
In Raipur, Durg or Rajnandgaon	1,317	−856
Registration still valid	1,127 not marked Expired	−190
Approved in the last 18 months	146	−981
Housing projects	135 residential, plotted or mixed	−11
Private builders	131 government bodies removed	−4
Promoter has 3 or fewer projects	82 **STAND-IN for small or medium**	−49
Not already your customer	80 **NAME MATCH ONLY**	−2
One row per builder	72 newest registration first	−8

Raipur 56, Durg 9, Rajnandgaon 7. The register has no size field, so "3 or fewer projects" is a stand-in: two of the six below pass it but are large groups.

Six sample records, researched by hand FACT 6 BUILDERS, NOT A FORECAST

BUILDER, AS ON THE REGISTER	WHO THE RERA CONTACT IS (OUR READING)	REAL OWNER OR DECISION-MAKER	WHATSAPP-CAPABLE PUBLISHED NUMBER?
Dee Vee Projects Ltd Raipur	Authorised officer, not a listed director	A whole-time director named on the company's own site; the director lists disagree. ◐ LIKELY	None found Landlines and a role inbox. A large group.
Biltech Estates Bhilai	Owner-level: matches the group's managing director	Managing director of Biltech Engineers Pvt Ltd. The link to this firm is inferred (shared address, name). ◐ LIKELY	Wired for WhatsApp An enquiry line, not his own.
Sendh Integrated Project Pvt Ltd Raipur	Authorised officer, not a director	Directors of a larger group. ◐ LIKELY	None found A project sales line. A large group.
Family firm Dongargarh	A promoter; the filed email looks like an adviser's	The family promoters. ◐ LIKELY	RERA mobile only WhatsApp on that mobile not confirmed.
New private company Naya Raipur	Unknown	Not found. ○ UNKNOWN	None found Not messaged.
Individual promoter Rajnandgaon	The promoter; the filed email is another firm's	Not found beyond the promoter. ○ UNKNOWN	None found Not messaged.

What this test found. Owner or decision-maker named, all Likely: **4 of 6** (95% range 30% to 90%). Two of the six are large groups; for the 4 small or medium builders it was **2 of 4**. A number wired for WhatsApp: **1 of 6**. A verified direct owner WhatsApp number: **0 of 6**. **A builder with no WhatsApp-capable published number is not messaged in the pilot.** Its record comes to you for a person to phone, outside the pilot. We never use an owner's personal WhatsApp number. Plan on a named owner for about half to two-thirds, and a minority being messageable. OPINION

Sources. Funnel: rera.cgstate.gov.in/Approved_project_List.aspx, 20 Oct 2026, one request, no login. Records: each builder's register page, own site and company-registry director listings, 20 Oct 2026; listings that bar automated use were read by hand. No phone, email or personal name is shown. **Verified** = own page or register plus a second independent source. **Likely** = one good source, role partly inferred. **Unknown** = no usable evidence. No record met the two-source rule.

The demo (2 of 3): the dashboard

This is the screen you would watch. The register data behind it is real. The counts, statuses and the example lead are invented to show the layout. Nothing on it has been sent.

Pipeline: where every builder stands

SAMPLE: INVENTED NUMBERS

RESEARCH	1	Researched	50	all in the batch
	2	Real owner named	30	60% of the step before
	3	Ready to send	16	53%. Number and text approved
WHATSAPP	4	Sent	15	94%. 1 still queued
	5	Delivered	7	47%. Meta limits cold messages
	6	Read	4	57%
	7	Page opened	2	50%
CONVERSATION	8	Replied	2	1 genuine, 1 automatic greeting
	9	Handed off to you	1	genuine replies only

A first batch of 50 builders. Not a forecast and not from any real send. Delivery to cold numbers is limited by Meta, so delivered is below sent. Builders with no WhatsApp-capable published number are not messaged; they stay as researched records. The last stage is a person, not the system.

ER

Example Realty Pvt Ltd

Sample Residency · Raipur · plotted development

Handed off to you

WHO IS BEHIND IT

SAMPLE

Company on the RERA register
Example Realty Pvt Ltd
Source: RERA register

Runs the project day to day
Anil Sharma (example name)
Sales head. Source: company website

Owner and decision-maker
Rakesh Verma (example name)
◐ LIKELY
Director. Sources: company website, a local news item

Goes to the owner's number ending 4821, from the company website. The RERA contact ending 0917 is set aside: it reaches the office.

SINCE WE MESSAGED THEM

SAMPLE

Day 0, 10:42 — **Message sent, reached their phone**
Video and page link, from the IV Infotech WhatsApp line

Day 0, 13:05 — **Opened the message, then the page**
Page opened 2 times in total

Day 1, 09:18 — **They wrote back**
"Excel mostly. Send me the details."

Day 1, 09:18 — **Genuine reply: you are alerted on WhatsApp**
All automatic messages to this builder stop

Day 1, 09:40 — **You took over**
You reply yourself from here

EXAMPLE LEAD, INVENTED NAMES Opens and reads are shown but never counted as interest: scanners and previews create false ones.

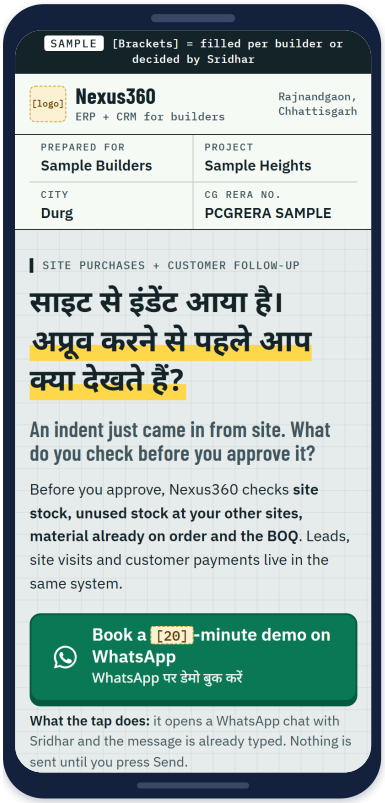

When a builder replies

- A typed reply or a button tap from a person is alerted to you on WhatsApp with the exact words, the builder and the owner. You answer; all automatic messages to that builder stop.
- STOP and automatic greetings are logged, not handed over. STOP is honoured.
- **Replies on your own number.** The page's "Book a demo on WhatsApp" button opens a chat on your own number, which we cannot see. We log the tap and stop the follow-up. You log or forward those conversations and we count them by hand.
- **Not built yet:** the reply rule for this account, so every reply on our line goes only to you. We set it up and test it before any send.

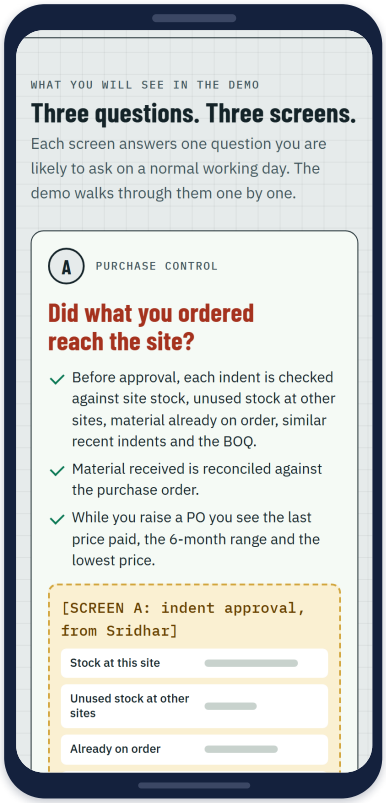

Sources. Sample dashboard built 20 Oct 2026 from the saved register list, redrawn here for print; a live sample is offered as a screen share. Alerts go to you on WhatsApp from our line; outside a 24-hour window they use a template that Meta may label as marketing and may limit, which is why the hand-off log exists.

The demo (3 of 3): the page and the video

You asked whether the personalised page and video can be made for Nexus360. They can. These samples use your public website and fictional builder names. Amber marks are filled per builder or by you.

First screen on a phone. The question in Hindi and English, one button, and a line saying what the tap does.

Further down. Your product shown as answers to a builder's daily questions, one screen each.

What changes per builder

Only the title block (builder, project, city, RERA number, date) and the first line of the WhatsApp message. The video, the product lines, your name and your number stay the same.

Where each line comes from

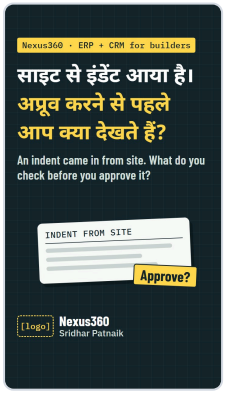

Every product statement is taken from nexus360.in. You confirm or strike each one. The grey boxes stay empty until you send recordings.

Built for an operator reading first

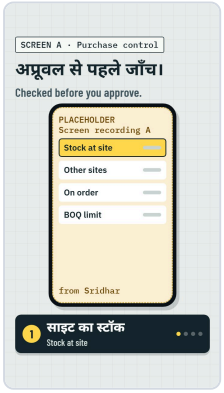

RERA numbers often reach an operator, so the page has a button: "Reading this for someone else? Forward it to the owner". Nothing is sent until the builder presses Send.

No savings, ROI or time-saved claims, no other builder's results, no price.

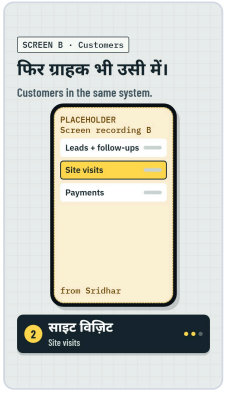

The video: 17 seconds, four scenes STORYBOARD FRAMES

0 to 3 s The question.

3 to 9 s Screen A: purchase checks.

9 to 13 s Screen B: customers.

13 to 17 s The ask: book a demo.

Voice. Your own voice for four short Hindi lines (our recommendation), English, or captions only. No AI voice unless you ask.

Our recommendation. OPINION One master video; the page header and the WhatsApp line carry the builder's name. A video per builder adds about 1 to 2 hours per 50 builders ASSUMPTION, and we have no evidence that it raises replies.

The Hindi lines are our draft and need a native-speaker check. The video is a storyboard, not yet a rendered file.

Sources. Product lines: nexus360.in, read 20 Oct 2026 (BOQ, indents and pre-approval checks, purchase orders, stock, leads, site visits, customer payment schedules). "Used across 20+ projects by 200+ people" is from nexus360.in and needs your confirmation. Your job title is not on the site, so none is shown until you confirm it. Builder page rendered at 390 px with fictional names; video frames from the storyboard animation. Nothing is live.

The two-week pilot

A fixed-price test on 50 builders over 14 days, plus a 3-day reply window, with the report on Day 17. **It mainly tests coverage, delivery and hand-off, not the reply rate: a reply-rate read needs about 150 builders.** It promises no customers.

What we do

- **50 builders** chosen with you, each with a research record checked by a person.
- **WhatsApp from IV Infotech's line** to builders with a WhatsApp-capable published number: up to 2 messages each, plus a retry if delivery fails. The others are not messaged.
- **Every genuine reply to you.** No AI conversation with an owner. A dashboard and a Day 17 report.
- Pass and fail rules agreed in writing before Day 0. What we need from you: page 9.

The channel: WhatsApp, from IV Infotech's line

The WhatsApp Business account is ours. Meta expects opt-in, and a number on a builder's site or the RERA register is not an opt-in. Some messages will not arrive, and Meta can limit the line if recipients block or report it. Our own first campaign: **2 of 7** cold templates on time, 1 about four hours late, 3 failed (Meta refused 2 under a per-recipient marketing limit, 1 undeliverable). So we send only to numbers the business published, 10 to 25 a day ASSUMPTION, with a STOP line in every message, and stop and tell you if Meta shows a warning.

How we measure, and the pass and fail rules agreed in advance

MEASURE	HOW IT IS COUNTED	PASS	IF NOT MET
1 Owner coverage	Builders with a named owner or decision-maker and a source (Verified or Likely). Our test: 4 of 6.	**20 of 50** or more (40%)	Narrow the segment or add research before any monthly run.
2 Builders with a WhatsApp-capable published number	A published number wired for WhatsApp, or a promoter's RERA-filed mobile. Our test: 1 of 6 wired, 1 more RERA mobile.	**15 of 50** or more (30%)	WhatsApp alone does not fit this market. The first touch moves to a person phoning the office line.
3 Delivery	Messages delivered to owner-level numbers, divided by messages sent to them. Not "on time". Our first campaign: 2 of 7 on time.	**60%** or more	Change the number, the channel or the first touch.
4 Genuine owner-level replies	A real two-way reply from an owner or decision-maker, typed or a button tap, including those you log or forward from your own number. STOP, auto-replies, greetings and wrong numbers do not count.	**1** or more	None: we do not recommend the monthly run. We offer the research-only list, or we stop.
5 Line health and hand-off	Meta quality rating and any restriction, read on Day 17. Each genuine reply alerted to you, with the minutes from reply to alert.	No warning or restriction. Every genuine reply alerted	Pause sends and use a separate number. We report each miss and fix the route.

Decision rule. If measures 1 to 5 are met, including at least one genuine reply, we recommend a second batch of about 150 builders, the first month of the run, as the real reply-rate test. **With no genuine reply from owner-level messages we recommend the research-only list or stopping, not the monthly run.** A miss on another measure means we change that first. We also report the cost per genuine reply (pilot fee plus WhatsApp fees, divided by genuine replies), with no pass mark. We decide together on the Day 17 call. The fee is fixed. Second messages go out on Days 10 to 13, so a later reply may miss the count.

The test is small. With 50 builders, perhaps 5 to 20 messages reach an owner-level number ASSUMPTION. If none of 13 messages gets a reply, the true reply rate could still be up to about 21% ESTIMATE. A reliable reply rate needs 100 to 150 builders, which is one month of the run.

Sources. Meta WhatsApp Business Messaging Policy (whatsappbusiness.com/policy) and pricing (developers.facebook.com/docs/whatsapp/pricing). Our first campaign: 7 cold templates, 2 on time, 1 about 4 hours late, 3 failed, 1 silent for 3 days (our records, 20 Oct 2026). One-sided 95% bound for the 21%. The 5 to 20 range and 10 to 25 a day are our assumptions. The 1-of-6 figure is from our 6-builder test (page 3).

The estimate

All prices are **proposed**, in Indian rupees, before 18% GST, and valid until 3 Nov 2026. WhatsApp message fees are not in the price: they are passed through at cost.

	A. Two-week pilot Recommended first step	**B. Monthly managed run** After the pilot, if you want it	**C. Research-only list** No messages sent. Lowest risk
SCOPE	50 builders over 14 days, replies counted to Day 17: research, page, video, WhatsApp where a number is published, hand-off, dashboard, report.	150 unworked builders a month, with a weekly report and a monthly review call.	One row per builder: real owner, sources, best route, confidence.
FEE, PROPOSED, BEFORE GST	**₹75,000** once, fixed, due whether or not builders reply. 50 builders × ₹1,500 = ₹75,000	**₹45,000** per month, stop at the end of any month. 150 builders × ₹300 = ₹45,000. **Indicative:** confirmed in writing after the pilot.	**₹18,500** for 50 builders (50 × ₹370), or ₹35,000 for 150 (150 × ₹233)
WITH 18% GST	**₹88,500** (₹75,000 + ₹13,500)	**₹53,100** per month (₹45,000 + ₹8,100)	**₹21,830** or **₹41,300**
WHATSAPP FEES AT COST, EXTRA	About ₹30 to ₹200, capped at ₹500	About ₹90 to ₹580 a month, capped at ₹1,500	None. Nothing is sent.
INCLUDED	▪ A checked research record per builder ▪ One master video, a personalised page, up to 2 WhatsApp messages each ▪ Every genuine reply to you, a dashboard, a Day 17 report	▪ Everything in A, for unworked builders ▪ Template and number upkeep	▪ Research records, a CSV and a dashboard view ▪ One correction round in 14 days
NOT INCLUDED	▪ Any promise of replies, demos or customers ▪ Email, calls, ads, other states, CRM integration, a licensed registry data source	▪ As A ▪ We suggest it only if the pilot measures are met	▪ Video, page, messages, hand-off ▪ A promise that every owner can be reached

Alternative to B: shared risk OPTION

Instead of B you can pay **₹30,000 a month plus ₹3,000 for each demo held** with an owner-level contact (15 minutes or more, confirmed by you). You choose after the pilot. Same 150 builders and the same service.

0 demos	2 demos	3 demos	5 demos
₹30,000	₹36,000	₹39,000	₹45,000

Up to 2 demos a month this costs less than one employee (₹36,900); at 5 demos it costs the same as B. **B itself is about 1.2 times one employee and is not cheaper on cost alone.**

WhatsApp fees, passed through at cost

Meta charges per delivered marketing message: **₹0.8631** in India, **₹1.02** with 18% GST. Our provider may bill more, so we allow up to ₹1.29. We pass on exactly what we are billed, with no markup, and ask you before passing the cap. Hand-off alerts are inside it.

Pilot: 100 to 150 messages if every builder had a WhatsApp-capable number (50 builders, 1 to 1.5 numbers each, 2 messages each); likely fewer, as only a minority does. 30% to 100% delivered = about **₹30 to ₹200**. **Month:** 300 to 450 messages, about ₹90 to ₹580. ESTIMATE

Sources. Meta India marketing rate ₹0.8631 per delivered message, as reported by Free Press Journal on 30 Sep 2026 citing Meta's India rate card (secondary; to be confirmed on Meta's rate card). Per-message billing: developers.facebook.com/docs/whatsapp/pricing, 20 Oct 2026. GST at 18%; providers list ₹0.99 to ₹1.09 before GST. Our own provider's rate is being confirmed. Message volumes and the 30% to 100% delivery range are assumptions anchored on our own campaign.

One sales employee, our system, or both

On cost alone the monthly run is not cheaper than one employee, and on research alone an employee is cheaper. What decides it is how many real conversations each one produces, which nobody can say yet.

	One sales employee Raipur, Bhilai or Rajnandgaon	**Our system** Pilot, then monthly run	**Both** System with you, or with an executive
Monthly cost ASSUMPTION	**₹36,900** all-in (band ₹20,000 to ₹67,000): pay ₹25,000, PF ₹1,600, incentive ₹5,000, phone and laptop ₹2,700, hiring and ramp ₹2,600. Excludes travel, gratuity and leave.	**₹45,000** a month for the run (indicative), after a ₹75,000 pilot, plus WhatsApp fees. About 1.2 times one employee.	With you closing: the system fee only. With an executive: ₹45,000 + ₹36,900 = **₹81,900**.
Time to start ASSUMPTION	4 to 8 weeks to hire, then about 3 months to full speed.	First sends about 7 days after we have your inputs, subject to Meta's approvals.	As the system. A hire adds the hiring time.
Cost per 100 builders researched ASSUMPTION	₹5,200 to ₹14,000, at 15 to 40 minutes per builder. No human timing was taken.	About ₹30,000, including messaging, follow-up, dashboard and hand-off. Our own staff time is assumed at 4.5 minutes per builder; a manual registry lookup can take 5 to 10. **On research alone an employee is cheaper.**	Both costs.
Talking to owners	Yes: phone, visits, Hindi and local dialect, objections. Can confirm by phone who the owner is.	No, by design. Every genuine reply goes to you.	You or the executive.
Records, and if it stops	Depends on discipline. If the person leaves, contacts leave unless logged.	A source and date for every fact; every send and reply logged. Stop at the end of any month.	Both.
Cannot do	Write a dossier for 100 builders a week, or log everything by itself.	Talk to an owner, phone, visit, negotiate or close. Promise delivery or a reply. Reach Madhya Pradesh.	Fix a weak offer.
Results so far	None yet for Nexus360.	None yet for builders. Our first campaign: 9 contacted, no confirmed genuine reply, 2 of 7 templates on time. Too few to conclude.	None yet.

Break-even. At ₹45,000 a month (indicative) the system costs about **1.2 times** one employee (₹36,900), so it wins on cost per qualified conversation only if it produces about 1.2 times as many. The ₹75,000 pilot costs about **2.0 months** of one employee and answers that before you commit. **What a conversation must be worth** depends on your first-year contract value, which we do not know. **Our recommendation:** decide by the measured pilot, and add an executive only if owners reply. ESTIMATE OPINION

How firm is the monthly price? Not firm yet: B is indicative, confirmed in writing after the pilot. It assumes about 4.5 minutes of our staff time per builder (checking the record and the message); a manual registry lookup can take 5 to 10 minutes, so we measure the real time in the pilot before we confirm it. The same applies to the shared-risk alternative on page 7.

Sources. Employee cost is our model for Raipur, Bhilai and Rajnandgaon. Fixed pay: Indeed Raipur (common ₹2.8 lakh a year, 19 Oct 2026) and Raipur postings of ₹15,000 to 30,000. PF ceiling ₹25,000 from 17 Sep 2026 (taxguru.in). Incentive, phone, laptop, tenure, hiring time and the 15 to 40 minutes of research per builder are our assumptions. Travel, gratuity, bonus and leave are not modelled and would add roughly 2% to 5%. Ramp of 3.0 months: Bridge Group 2025, mostly US data. Replace these with your own figures.

Timeline, Day 0 to Day 17

Day 0 is the day we have your written approval. We count in days from Day 0 because Meta's approval of a number or template is outside our control. If one is late, we tell you the same day and agree a revised plan. Nothing is sent to any builder before you approve the messages on Day 6. Second messages go out on Days 10 to 13, so replies are counted until Day 17. The timings are our assumptions ASSUMPTION.

Who does what

Our team

Checks every research record before the first send, sets up and tests the reply route, and reports the minutes from each reply to its alert. Any phone call or conversation with an owner is human.

The AI

Researches, drafts, sends the two fixed messages you approved and logs everything. It does not answer a reply, phone, negotiate or close. A reply or a button tap ends all automatic messages to that builder.

You

Approve the list and, on Day 6, the exact messages. Take every genuine reply. Join a 15-minute weekly review ASSUMPTION. Agree the pass and fail rules in writing before Day 0.

What we need from you

- **Positioning** (Day 0). Who you sell to, the one thing a builder should remember, a yes or no on each product line, including "20+ projects" and "200+ people", and your job title as you want it shown. It is not on nexus360.in, so we show none until you confirm.
- **Footage** (by Day 3). Two to three screenshots, or two short recordings with sample data: an indent approval with its checks (6 to 8 s), and a lead, follow-up and payment schedule (5 to 6 s). Your logo.
- **Permission** (by Day 3). The Nexus360 name in messages and in the WhatsApp display name. Any customer name, with that customer's written yes.
- **Hand-off** (by Day 3). A WhatsApp number for alerts, your reply hours or a calendar link, demo length, and whether it is free.
- **Your customer list,** so we do not contact existing customers, and a voice choice: your own voice for four short Hindi lines, English, or captions only.
- **Replies on your own number.** Log or forward the page-button taps that became conversations. We count them by hand.
- **Optional.** Your numbers for the comparison. CRM test access: a test account and API notes. We cannot price that until we see the API; it is in no price here.

Sources. Timeline and effort are our plan, not measured. Meta approval times are outside our control.

Limits, compliance, terms and next steps

Limits

- The real owner's direct number is often not public. In our test it was found for none of six, and a number wired for WhatsApp for one of six. A builder with no WhatsApp-capable published number is researched but not messaged in the pilot.
- We do not promise replies, demos or customers. Our first campaign contacted 9 builders and has no confirmed genuine reply yet. That is too few to conclude anything.
- Delivery depends on Meta. 2 of 7 of our own cold templates arrived on time.
- **Madhya Pradesh is not automated.** Its RERA site's robots.txt disallows bots. We could ask MP RERA for permission or build a list by hand, later. Neither is in this proposal.
- "Small or medium" is a stand-in until we use filed project cost and a group check. Director lookups are done by hand in the pilot; automating them needs a licence that is not priced here.
- **Correction to our first message.** It quoted "92+ staff hours" and "₹23,000+ monthly overhead saved". We cannot source those figures, so please disregard them. The pilot is a 14-day test, not a finished deployment.

Compliance RISK SUMMARY, NOT LEGAL ADVICE

- **Public data only.** Contact details only where the business published them (its own site, an ad or the RERA register), stored with source and date. No bought lists. Numbers are masked in reports.
- **Opt-out.** Every message carries a STOP line. STOP is honoured and added to a suppression list.
- **Meta policy.** WhatsApp expects opt-in. Messages to published numbers carry a risk of limits or a block. The account is ours, so we carry that risk.
- **DPDP Act 2023.** Data made public by the person, or by someone legally bound to publish it, may fall outside the Act (section 3). Director names from third-party listings may not. Most duties start about May 2027. We follow the practice now: a notice on the page, takedown on request, a deletion date for unverified contact data. Ask your own counsel.
- **Sender.** We recommend a separate +91 WhatsApp number with a clear display name, subject to Meta's approval and your permission, so a restriction does not reach our other lines.

Terms PROPOSED

- **Payment:** To be agreed. We suggest 50% on written approval and 50% at the Day 17 report.
- **Credit:** No part of the pilot fee is credited to month 1 of the run: the pilot already covers the set-up that a run without a pilot would pay for.
- **Skipping the pilot:** month 1 of the run adds a one-time set-up of about ₹53,000.
- **Data and exit:** Your lists and records are exported to you at the end of the pilot and on request, as CSV: the research records, the send and reply log and the dashboard data. Either side can stop at any month end. Retention and deletion of builder contact data are agreed in writing before Day 0.
- **The pool is finite.** About 424 small promoters are on the register in the three districts, 798 in the state, counting registrations of any age. At 150 unworked builders a month that lasts roughly 3 to 5 months. After that about 4 builders a month newly qualify, so we would propose a lower fee.

Next steps

1. **Walkthrough.** A 15-minute screen share of the dashboard, the builder page and the video storyboard.
2. **You choose** the pilot (recommended), the research-only list first, or a different structure.
3. **You send** the inputs on page 9 and confirm the pass and fail rules in writing. We confirm price, scope and Day 0 in writing.
4. **Day 0.** We start. Nothing reaches a builder until you approve the messages.
